

Developed in cooperation with the Dr. Rath Research Institute

Dr. Rath Research Institute for Cellular Medicine

The Dr. Rath Research Institute is an international research institution in the field of science-based natural therapies.

The research published by this institute laid the foundation for a new understanding of the development of cardiovascular diseases. Our team of international scientists has also made significant contributions to research on the natural causes of cancer and other common diseases.

By purchasing our Cellular Nutrient Formulas you support the continuation of this independent natural health research.

New! Dr. Rath Vitamin D3™ Pocket

Well supplied with vitamin D?

Among vitamins, vitamin D has a special status. It can be produced by our skin if there is sufficient sunlight; specifically, UVB radiation. For this reason, vitamin D is also called the "sunshine vitamin".

The functions of vitamin D include, among others:

- support for the normal metabolism of calcium and phosphorus
- contribution to the maintenance of normal bone and muscle function
- influence on the maintenance of normal teeth
- function in cell division and immune system

In the dark winter months, beyond the 40th degree of latitude, the intensity of solar radiation is often insufficient for vitamin D formation in the skin. For this reason, especially between October and March, it should be ensured that sufficient vitamin D is supplied in the diet.

In the summer months, a sufficient vitamin D intake is also important. The majority of people reside in areas where solar radiation is diminished by urban haze.

In addition, in the summer most people also stay indoors. As a result, there will only be a limited synthesis of vitamin D in the skin.

NEW in our Dr. Rath Cellular Nutrient Programme:
Dr. Rath Vitamin D3™ Pocket –
The ideal companion for when you're on the road!

Most people are aware of the importance of a good vitamin D supply.

In order to meet different situations and individual requirements with this important vitamin in an additional dosage form, we have completed our vitamin D3 range with the Dr. Rath Vitamin D3™ Pocket.

As with our vitamin D3 formula in liquid form, there are many advantages for a simple application with this pocket form:

- Ideal for when you're on the road
- 1500 IE (international units) in only one tablet
- Excellent for individual dosage

Just like Dr. Rath Vitamin D3™ liquid, Dr. Rath Vitamin D3™ Pocket also contains high doses of vitamin D in the form of the easily bio-available vitamin D3. While the liquid formula is dissolved in oil, Dr. Rath Vitamin D3™ Pocket is offered as a mini-tablet.

New! Dr. Rath Vitamin D3™ Pocket

- Simple application
- Ideal for when you're on the road
- Individual dosage
